comprising one volume of functional and modified polymeric materials two volume set this well organized collection of papers by professor eli ruckenstein and co workers focuses on functional and modified polymeric materials prepared mainly through solution polymerization and surface polymerization although solution polymerization has been broadly utilized for the preparation of polymeric materials the book shows significant approaches to special classes of polymeric materials including functional polymers by living ionic polymerization degradable and decrosslinkable polymers semi and interpenetrating polymer network pervaporation membranes and soluble conducting polymers it also focuses on preparing and modifying conductive surface of polymer or polymer based materials

plants have been exposed to multiple environmental stressors on long term seasonal and short term daily basis since their appearance on land however the frequency and the intensity of stress events have increased much during the last three decades because of climate change plants have developed however a multiplicity of modular and highly integrated strategies to cope with challenges imposed by novel usually harsher environments these strategies include migration acclimation and adaptation twelve articles in this research topic exactly focus on the relative significance of these response mechanisms for the successful acclimation of plants to a wide range of novel environmental pressures four articles additionally explore how plants respond to severe stress conditions resulting from the concurrent action of multiple stressors ten articles mostly examine how morpho

anatomical physiological and biochemical related traits integrate when plants suffer from novel threats such as solid gaseous and electromagnetic pollutants suitable physiological indicators for developing conservation strategies are described in the last two works this research topic highlights that bottom up as well as top down approaches will be necessary to develop in near future in the study of plants responses to environmental pressures

nitrogen is arguably the most important nutrient required by plants however the availability of nitrogen is limited in many soils and although the earth's atmosphere consists of 78.1% nitrogen gas N_2 plants are unable to use this form of nitrogen to compensate modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity however a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer moreover carbon dioxide CO_2 which is released during fossil fuel combustion contributes to the greenhouse effect and run off of nitrate leads to eutrophication of the waterways biological nitrogen fixation is an alternative to nitrogen fertilizer it is carried out by prokaryotes using an enzyme complex called nitrogenase and results in atmospheric N_2 being reduced into a form of nitrogen diazotrophic organisms and plants are able to use ammonia it is this process and its major players which will be discussed in this book biological nitrogen fixation is a comprehensive two volume work bringing together both review and original research articles on key topics in nitrogen fixation chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation volume 1 explores the chemistry and biochemistry of nitrogenases nif gene regulation the taxonomy evolution and genomics of nitrogen fixing organisms as well as their physiology and metabolism volume 2 covers the symbiotic interaction of nitrogen fixing organisms with their host plants including nodulation and symbiotic nitrogen fixation plant and microbial omics cyanobacteria diazotrophs and non legumes field studies and inoculum preparation as well as nitrogen fixation and cereals covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field biological nitrogen fixation will be a one stop reference for microbial ecologists and environmental microbiologists as well as plant and agricultural researchers working on crop sustainability

deforestation and land use change have led to a strong reduction of tropical forest cover during the last decades climate change will amplify the pressure to the remaining refuges in the next years in addition tropical regions are facing increasing atmospheric inputs of nutrients which will have unknown consequences for the structure and functioning of these systems no matter if they are within protected areas or not even remote areas are expected to receive rising amounts of nutrients the effects of higher rates of atmospheric nutrient deposition on the biological diversity and ecosystem functioning of tropical ecosystems are poorly understood and our knowledge of nutrient fluxes and nutrient limitation in tropical forest ecosystems is still limited yet it will be of paramount importance to know the effects of increased nutrient availability to conserve these ecosystems with their biological and functional diversity during the last years research efforts have more and more focused on the understanding of the role of nutrients in tropical ecosystems and several coordinated projects have been established that study the effects of experimental nutrient addition this research topic combines results from experiments and from observational studies with the aim to review and conclude on our current knowledge on the role of additional nutrients in ecosystems

school apart from being a place of education and transmission of new knowledge should also be a place of personal development and enhancement of students well being and mental resilience while protecting mental health and preventing teacher burnout the current covid 19 pandemic has made the need for psychological support for students and teachers more urgent than ever the science of positive psychology has offered many tools and methods that are particularly effective in the school environment and in educational contexts in general new tools methods and practices are needed to enhance the well being and psychological resilience of students teachers and parents in a time of challenges such as the current pandemic and inflation that cause stress uncertainty and an increase in psychopathology
